

Innovative GIS Solutions for Government and Industry

Introducing The CAMPS™ Email Notify Module

- Are your GIS technicians communicating effectively with end users about data update?
- Are your end users in the loop as to what is being updated in your GIS?

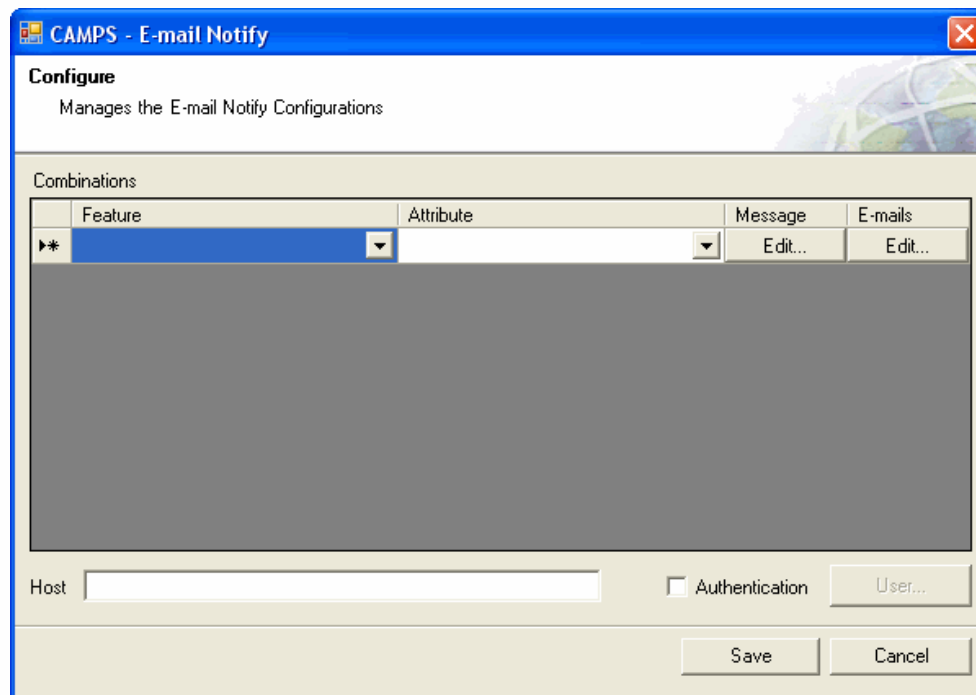

Today, local government agencies are required to justify their GIS investments. Many IT managers must now demonstrate a real return-on-investment (ROI) and develop a business case for every investment in technology. End users are not always up to date and what changes are made to the GIS data layers by technicians.

If you have any of the above issues or you simply just want to improve communication about your data updates...

The CAMPS™ Email Notify module is the solution!

The CAMPS™ – Email Notify application will automatically generate and send an e-mail to data maintainers and other users when a specified attribute on a feature is populated / modified.

The CAMPS™ – Email Notify configuration is handled through ArcCatalog. When the appropriate attribute is updated in ArcMap, e-mails will be sent to the e-mail addresses configured through ArcCatalog. A user can configure the e-mails the message will be sent to, the exact text of the e-mails and the title of the e-mail.

Passionate About Quality | Committed to Customer Service
